

SHOULDER ULTRASOUND

STATE OF THE ART

In collaboration with shoulder surgeons and radiologists, I have developed our most comprehensive and advanced 2 day course ever!

The basis for the course is also my 20 years of working with shoulder diagnostics and 10 years of diagnostic ultrasound exclusively on shoulder patients. Both in hospitals and private orthopedic clinics as well as radiology departments. Thru the years I have conducted ultrasound diagnostics in clinical trials, arranged loads of courses, workshops and lectures for healthcare providers in shoulder units, radiology departments, primary care and other healthcare facilities.

During this course, patient cases, demonstrations, supervised practical training and theoretical blocks will be mixed. Everything to optimize your learning. I am convinced that, regardless of what courses you have previously taken and your previous degree of experience, you will leave this course with new knowledge and take a step forward in your continued development in the exciting world of diagnostic imaging of shoulder patients. The course is aimed at GPs, orthopedic surgeons, radiologists, physiotherapists, sonographers, naprapaths and chiropractors.

Welcome!

TEACHER:

Magnus Wennerlund works as an extended scope physiotherapist/orthopedic assistant at the orthopedic clinic and radiology department at Västerås Hospital, Sweden. He also works as a consultant for private orthopedic surgeons. He is specialized in shoulder ultrasound and diagnostics. He performs ultrasound guided injections/interventions on shoulder patients on a daily basis. Organizes lectures, courses and workshops in shoulder ultrasound and shoulder interventions.

REGISTRATION:

Location: Gothenburg, Sweden

Price: 5500 SEK / 540 €

VAT excluded, Lunch, coffee/tea and course material included

Dates:

5-6 Septemebur Available

18-19 October FULLY BOOKED

20-21 October FULLY BOOKED

Register by email to:

Examples from the course content:

- Assessment of the rotator cuff and biceps tendon into the smallest detail.
- Grading and interpretation of rotator cuff ruptures, degree of fatty infiltration and atrophy.
- Which patients should be referred to an orthopedic surgeon and which can be treated conservatively?
- What should be included in your ultrasound report?
- How well can we assess the GH joint and labrum with ultrasound and when do we need MRI or MRI Arthrogram?
- Fractures, cysts, bumps and lumps
- The postoperative shoulder. Learn to avoid pitfalls after rotator cuff surgery and other orthopedic surgeries.
- AC-joint dislocations, could ultrasound provide a better grading of these injuries than plain X-ray?
