

# SHOULDER ULTRASOUND

Advanced 2-day Course in Stockholm  
Sweden, 26-27 January

The course is aimed at doctors, physiotherapists, naprapaths, chiropractors and sonographers who wants to deepen their knowledge and skills in shoulder ultrasound. You need basic skills in MSK ultrasound to take the course.

## Examples from the course content:

- Assessment of the rotator cuff and biceps tendon into the smallest detail.
- Grading and interpretation of rotator cuff ruptures, degree of fatty infiltration and atrophy.
- Which patients should be referred to an orthopedic surgeon and which can be treated conservatively?
- What should be included in your ultrasound report?
- How well can we assess the GH joint and labrum with ultrasound and when do we need MRI or MRI Arthrogram?
- Fractures, cysts, bumps and lumps
- The postoperative shoulder. Learn to avoid pitfalls after rotator cuff surgery and other orthopedic surgeries.

## TEACHER:

*Magnus Wennertund works as an extended scope physiotherapist/orthopedic assistant at the orthopedic clinic and radiology department at Västerås Hospital, Sweden. He also works as a consultant for private orthopedic surgeons. He is specialized in shoulder ultrasound and diagnostics. He performs ultrasound guided injections/interventions on shoulder patients on a daily basis. Organizes lectures, courses and workshops in shoulder ultrasound and shoulder interventions.*
